## Union Carpenters and Contractors... Working Together, Working With You!

Architects, if you have yet to get involved...its time to put on your work boots and grab a hammer! The NJ Regional Council

of Carpenters and their Union Contractor Employers host a unique hands-on program called Carpenter Workshop. The program is geared toward the architectural community, and since its inception in 2002, more than 1,000 architects and owner representatives have visited carpenter training centers.

Carpenter Workshop provides an opportunity for architects to interface with experienced craftsman and exchange ideas about complex construction issues. Preparing ceilings systems to accommodate IBC seismic codes, welding vinyl sheet flooring, and back cutting crown molding are just some of the aspects on display for the architects to view and get their hands dirty.

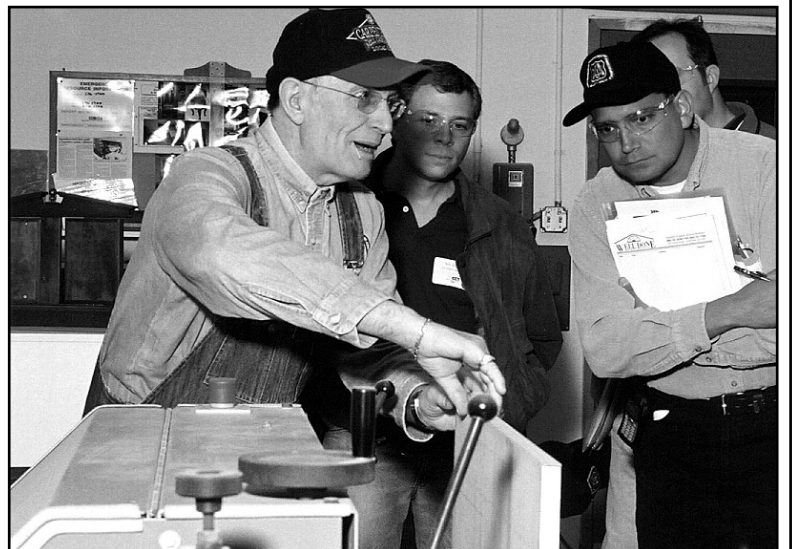

Carpenter Workshop was designed specifically to expose practicing architects to various aspects of the carpentry trades in an up-close and personal manner. Sessions include wood framing, concrete form work, architectural wood work, floor systems, and drywall & interior systems. Each session begins with a technical lecture driven by leading manufacturers such as Armstrong, USG and Deitrich, to name just a few. Then the excitement begins when attendees are ushered out into the workshop and participate in a hands-on environment led by Union Carpenter Instructors and apprentices.

Carpenter Workshop seminars are held in Kenilworth, Trenton and Hammonton and offer 3 AIA learning credits for only \$20. The events are sponsored by the NJ Carpenter Contractor Trust. To learn more and to register log on to [www.njcct.org](http://www.njcct.org)
